(5) Summary of invention.

Referring now to FIG. 18, the details of the CPU bus arbiter 414 are shown in more detail to include a priority/fairness controller 1002, a control 1004, and an enable network 1006 all arranged as shown to provide CPU bus address bus grant signals CPU_BG_, DMAXMT_BG_, DMAREC_BG_, and DPDMA_BG_ for the CPU 310, DMA REC 424, DMA XMIT 418, and, Data Pipe DMA unit 403, and data bus grant signals CPU_DBG_, DMAREC_DBG_, DMAXMT_DBG_, and DPDMA_DBG_ for the CPU 310, DMA XMIT 418, DMA REC 424; and, Data Pipe DMA 403. Such bus grant signals are produced selectively in response to bus requests signals CPU_BR_, DMAREC_BR_, DMAXMT_BR_, and DPDMA_BR_ from the CPU 310, DMA REC 424; DMA XMIT 418, and, Data Pipe DMA 403, respectively. The details of the priority/fairness controller will be described in connection with FIG. 18. Suffice it to say here, however, that the controller 1002 is a decoder which implements a "Truth-Table", such "Truth Table" in turn implements a priority/fairness algorithm based on the following principles:

A. The CPU 310 is parked on the address portion of the CPU bus 317; that is, the CPU 310 is granted the CPU address bus 317 by default;

B. The address portion of the CPU bus 317 will be granted to the candidate with the highest priority **if such candidate requests the address bus (BR) subject to conditions C and D below, the priority order being as follows:**

1. CPU 310 (i.e., highest priority);
2. DMA REC 424;
3. DMA XMIT 418;
4. Data Pipe DMA 403 (i.e., lowest priority),

C. When multiple candidates are requesting the CPU bus 317, the "highest priority" requesting candidate will not be granted the bus if such candidate was the recipient of the previous address bus grant (BG_), subject to condition D below.

D. Each candidate shall have an independent "wait count" that indicates that the candidate has waited for n assertions of BG_ to other bus candidates without being granted

the address bus BG_ itself. If a candidate's predetermined wait count limit is reached, that such candidate receives the next address bus grant BG_. However, if multiple candidates simultaneously reach their respective "wait count" limit, then the address bus grant BG_ will be granted in accordance with the priority:

1. CPU 310 (i.e., highest priority)
2. DMA REC 424;
3. DMA XMIT 418;
4. Data Pipe DMA 403 (i.e., lowest priority).

(6) Issues. A concise statement of the issues presented for review.

Is claim 1 anticipated by U. S. Patent No. 5,754,800, Lentz et al., under 35 USC 102? |

(7) Grouping of claims.

There is only one claim.

(8) Argument.

The essential issue here is whether, in the default case when no candidate is requesting the bus, the action of "***assigning a priority***", as in Lentz et al., is a different action than actually "***granting access to the bus***", as claimed.

In the art, the action of granting bus access to a given candidate in the absence of a bus request by *any* of the candidates is referred to as "parking" the given candidate on the bus. The significant difference between "parked" and "non-parked" arbitration schemes is well known in the art and is described, by example, pages 9-13 and 9-14 of the MPC7450 RISC Microprocessor Family User's Manual by Motorola previously submitted.

Thus, the claim states that one of the candidates ***is granted*** access to the bus, *even in the absence of any bus request (the "default")*. Thus, even assuming arguendo that Lentz et al. ***assigns a highest priority*** to a candidate in the absence of any bus request, as alleged by the examiner, the applicant takes the process ***one step further*** by actually ***granting access to the bus*** to the predetermined one of the candidates. The examiner has not pointed out where

Lentz et al. describes this further granting step. The applicant again requests that the examiner point out the column and line number where Lentz et al. allegedly states that *the highest priory candidate is actually granted access to the bus in the absence of a bus request.*

The Examiner's position is as follows:

(1) "Lentz et al., discloses granting default access to the bus to a predetermined one of the candidates (in Lentz et al., the predetermined one of the candidates is the one that is assigned a highest priority when no requests from other candidates are made. ... it is clear from Lentz et al. that each candidate is assigned a predetermined intrinsic priority, and arbitration is based on a fixed or dynamic priority scheme). "

(2) Also, contrary to Applicants argument, not just priority is assigned to a predetermined candidate but also bus access is granted to the predetermined candidate. There is no reason to assign priority to a candidate without giving it access to the bus. See at least example Fig. 3 and column 9, line 58 to column 10, line 17."

Considering each of the Examiner's points above:

(1) "Lentz et al., DOES NOT disclose granting default access to the bus to a predetermined one of the candidates. Further, assigning priority is not the same act as granting access to the bus. Lentz does not GRANT access to the bus in a DEFAULT SITUATION.

(2) With regard to the Examiners' statement that "There is no reason to assign priority to a candidate without giving it access to the bus", such statement disregards the situation where the arbiter can be designed to take no action (gives no bus grant) after assigning priority when there is an absence of any bus requests, this is a "non-parked" situation. Thus, it does not necessarily follow that a grant to the bus occurs in the absence of a request, as inferred by the Examiner. The Examiner refers to "Fig. 3 and column 9, line 58 to column 10, line 17", yet these lines explicitly describe a case where an entity *is requesting* the bus. Hence, Lentz et al. is not describing the default case where *no entity is requesting* the bus.

*In view of the foregoing, it is Application's position, that the step of **GRANTING** DEFAULT access to the bus to a predetermined one of the candidates is not disclosed in, nor is it inherent in, Lentz et al.*

Respectfully submitted,

Date: _____

Appendix.

1. A bus arbitration method for granting access to a common bus having coupled thereto a plurality of candidates desiring access to such bus, one of such candidates being granted access to such bus in accordance with the a method comprising:

granting default access to the bus to a predetermined one of the candidates or, in the absence of such default granting,

granting access to the bus to one of the candidates in accordance with predetermined priority criteria, such grant being modified when a plurality of such candidates request the bus, such grant to the bus then being such that the one of the candidates requesting the bus having the highest priority in the predetermined priority criteria not be granted the bus if such candidate was the recipient of the previous bus grant and with each one of the requesting plurality of candidates having a predetermined independent "wait count limit" indicating that such requesting one of the plurality of candidates has waited for n assertions of a grant to the bus to other requesting candidates without being granted the address bus, where n is a predetermined integer, and wherein if one of such candidate's "wait count limit" is reached, such candidate receives the bus grant, except that if plural requesting candidates simultaneously reach their respective "wait count limit", then the bus grant will be granted in accordance with the predetermined priority criteria.
